1. DESCRIPTION

This product is an IO breakout board for the Osbourne carrier board, incorporating standard right angled latching connectors on a PCB mounted in-line with the Osbourne carrier board. The two-board assembly is intended to sit atop a heat spreader to provide a thermally efficient, rugged, compact solution for embedded Jetson AGX Orin applications.

The board can be powered from a wide input voltage range of +7V to +20V. It offers 1G and 10G Ethernet port, one HDMI 2.0a/b video output option, audio, 2xR232, 2xRS232/422/485, 2xUSB2.0, 3xUSB3.2,CAN,DIO. Some of the additional interfaces like power button, force recovery, reset, I2C, and SPI are available on a utility header. All I/O features available on the Osbourne main I/O connector are made available on pin headers for user access.

Additionally, the SAM-based Data Acquisition circuit used on other Jetson carriers such as Jethro, Elton, and Stevie is added to this I/O board to provide even greater utility.

1.1 I/O Features and Connector Locations

Feature	Description	Connector Type
Power	7- 20V wide input supply	2x4 latching Samtec IPL connector
DAQ	A/D, D/A, and DIO	2x13 2mm Latching FCI connector
1G Ethernet	10/100/1000Mbps MDI	2x5 2mm Latching FCI connector
10G Ethernet	10G MGBE	2x5 2mm Latching FCI connector
Audio	Audio I/O signals include stereo line out and mono mic in	2x5 2mm Latching FCI connector
DAQ Programming header	CLK, DATA, RESET, 3V3, GND	1x6 pin header (factory use only)
Remote control	Reset, recovery, power on, I2C, MEM_ERS	1x8 connector
Utility	I2C, SPI, System reset, System power On, MEM_ERS, Force recovery	2x5 2mm Latching FCI connector
USB 2.0	Standard USB 2.0	2x5 2mm Latching FCI connector
USB 3.1	3 ports USB 3.x with USB 2.0 fallback	3x 2x5 2mm Latching FCI connectors
RTC	RTC Battery connector	1x2 Latching connector
CAN	CAN-1 and CAN-2	2x5 2mm Latching FCI connector
DIO Port	Digital IO Port0-7	2x5 2mm Latching FCI connector
Serial Ports	4 ports with RS-232/422/485 capability	2x 2x5 2mm Latching FCI connectors
HDMI	HDMI 2.0 capability	2x10 2mm Latching FCI connector

1.2 Operating System Support

- ◆ Supported by standard Nvidia Jetson BSP for Osbourne

1.3 Mechanical, Electrical, Environmental

- ◆ Form factor 120mmx45mm (I/O adapter)
 165 L x 137 W x 36mm H / 6.5 x 5.4 x 1.4" (fully assembled with heat spreader)
- ◆ Cooling Conduction cooling (complete system)
- ◆ Power input 7 – 20VDC
- ◆ Operating Temp -40°C to +80°C ambient (to support all models of AGX Orin)

2. KEY SUBSYSTEMS

1.4 System overview

The embedded IO board interfaces with Osbourne base board and provides I/O connectors for all the major features such as HDMI, USB3, USB2, ethernet, audio, utility, power supply and additional I/O capability.

1.5 Power Supply

The board can be powered from a wide input voltage range of +7V to +20VDC. All required supply voltages for the board are derived from the main supply voltage fed into the Osbourne board and then back to the I/O board via the main I/O connector.

1.6 Ethernet

The board offers one 10/100/1000Mbps Ethernet port and one MGBe ethernet port capable of supporting 1, 2.5, 5, and 10Gbps data rates.

10G Ethernet port is terminated onto a 2x5 latching connector. Onboard magnetics is provided. LED signals are provided for Link, Activity, and Speed Indication.

1G Ethernet port is terminated onto a 2x5 latching connector with onboard magnetics and LED signals.

1.7 Display

The board offers one HDMI2.0 a/b video output option. The HDMI signals are available on the I/O connector and is terminated on a latching 2x5 connector

The HDMI hot plug detector and I2C circuitry are incorporated on the board. The 5V output required on the HDMI is controlled through a switch.

1.8 Audio

Audio I/O signals include stereo line out and mono mic in. The audio signals are made available on the I/O connector and are terminated onto a 2x5 latching connector.

1.9 Serial Ports, DIO, CAN

Serial port 1 and serial port 2 is made available on a latching 2x5 connector. Also 8 DIO's can be made available on a 2x5 connector and CAN1-2 is made separately available with a 2x5 connector.

For more information see [Jumper Configuration](#)

Serial port 3 and 4(RS232) are separately available on a 2x5 latching connector.

1.10 USB

The board provides access 2x USB2.0 via USB 2.0 hub routed to the Osbourne main I/O connector. Three USB3.2 and three USB2.0 ports are also routed to the I/O connector.

The 3x USB 3.1 is terminated on 2x5 latching connectors separately and marked as USB3-1, USB3-2, USB3-3

One number of USB2.0 is terminated on 2x5 latching and marked as USB2

1.11 Utility

Some of the additional interfaces like Power button, Reset, I2C, SPI, MER_ERS and Force recovery signals are available through a 2x5 utility latching connector.

1.12 Jumper Configuration

Jumpers are provided as an ORing option between SPI signals to DAQ or Utility header.

The configuration is as given below:

SPI Selection header JP1

Position	Function	IN	OUT
1	DAQ SPI MOSI	SPI MOSI CB*	DAQ
3	UTIL SPI MOSI	SPI MOSI CB	UTILITY
5	DAQ SPI MISO	SPI MISO CB*	DAQ
